

# The PMS Structogram Editor

Universal Programming Studio – your complete system solution for the embedded software development

*The PMS Structogram Editor features powerful programming in structograms*

1 - The user interface of the PMS Structogram Editor

## **The PMS Structogram Editor**

The PMS Structogram Editor is a new release from PMS, the leading company for graphical programming tools. In contrast to other structogram editors, SGE is very easy to handle. SGE enables you to create your structograms as easy as creating a text in a text editor. All the features which you are used to from for example MS-Excel are just as easy accessible in SGE: insert and delete rows and columns, change the width of rows and columns and insert and modify all structogram objects by a single mouse click. But SGE can do much more. SGE is an intelligent editor. When you for example insert or delete structogram elements, SGE always automatically keeps a clean structural and modular structure for you. SGE knows your wishes and intentions and can speed up your work, so you achieve your goals faster and more relaxed

## **The Highlights**

- \* Unmatched ease-of-use MS-Windows user interface
- \* SGE is a modern vector oriented graphical editor: high quality and fast graphics
- \* Unlimited undo and redo functionality
- \* Generating pure C code completely without control comments“
- \* Any C code will be displayed 1-to-1 as structogram
- \* Online monitoring and control via TCP/IP or fieldbusses or real time simulation
- \* Wysiwyg - What you see is what you get – the screen is identical to the print out
- \* Easy scrolling of pages on mouse click: first, previous, next, last, insert and delete
- \* Macros instead of „compressions“: Macros can be called as often as you want
- \* SGE can be combined with the other UNIVERSAL PROGRAMMING STUDIO editors
